Installing MAGGEY Deluxe on a Network

CMSC, Ltd. does not charge any additional fee for installing MAGGEY Deluxe software on a network drive. However, you must have appropriate rights on your network for MAGGEY Deluxe to function normally. Talk to your Network Administrator before installing any software on your network.

MAGGEY Deluxe's installation will default to C:\Maggey Deluxe. Although this path is good on the shared computer, be sure to use the Advanced Options Installation and change only the first line (Program Files folder) location if installing from a workstation to the network drive. Follow these other simple rules to accomplish a successful shared installation.

1. The computers will be sharing the data files and program from one location. Be sure to share only that directory, it is not necessary to share the entire drive. Windows systems will not allow workstations to have access to the Program Files or Program Files (x86) folder so it is **not recommended** to install MAGGEY Deluxe within them.

2. MAGGEY Deluxe cannot be accessed on the shared computer or server unless the currently logged in user on the workstation is also a user on the shared computer. Both workstation and server accounts must have matching username/passwords and must have "Power Users" or Administrative rights. This **cannot** be accomplished by assigning all computers to the same Home group instead of having users.

3. The fastest way to share the MAGGEY Deluxe folder on newer versions of Windows is to use the built-in **File Explorer app**. Locate the MAGGEY Deluxe folder you need to share within the app and highlight it. Across the top you will see the **File, Home, Share and View** options. Choose **Share** and the Share With list will appear. Scroll down and click on the specific people option. Use the pull down box on the Network access screen to choose each user that needs shared access to the folder and click **add.** Be sure to give users Read/Write rights so they have the ability to change all files in the shared directory.

4. Windows Components: Each workstation that will run MAGGEY Deluxe must have all of the system files that we distribute with the software. This can be accomplished by installing the system files by using the System Setup option on your installation CD and then drag and drop a shortcut to MAGGEY.EXE, WinTime.EXE and Menus Deluxe.EXE on the Desktop.
